

HHMS

Accounting Entries Training Manual

How to record, approve, verify, and report financial transactions

For administrators, accountants, and authorized operations staff

Version: August 2026

1. Accounting workflow at a glance

HHMS connects operational records to accounting. A clean workflow starts with the source document, assigns the correct unit and responsibility, passes approval, and then appears in the ledger and reports.

1. SOURCE	2. CLASSIFY	3. APPROVE	4. POST	5. REPORT
Invoice, receipt, utility bill, booking payment	Date, account, unit, owner, vendor, VAT	Pending to reviewed to approved/paid	Ledger, bank/cash, owner statement	P&L;, VAT, ageing, balance sheet

Golden rules

1	Never post without a supporting invoice, receipt, payment proof, or written authorization.
2	Select the correct unit and building. Unit numbers can repeat across buildings.
3	Use Owner responsibility only when the owner must bear the cost.
4	Keep new expenses Pending Approval unless an authorized approver is completing the entry.
5	Do not duplicate an entry. Search by reference, supplier, date, and amount first.
6	Use the transaction reference from the bank, card, receipt, or supplier document.

Status meanings

Status	Meaning	Accounting effect
Draft	Incomplete or imported record	No posting
Pending	Waiting for review	No posting
Reviewed	Checked but not approved	No posting
Approved	Authorized expense	Posts to ledger and owner statement when applicable
Paid	Approved and settled	Posts and affects selected bank/cash account
Rejected	Not accepted	No posting

2. Recording an expense

Open Accounting > Expenses > Record Expense.

Field	What to enter	Example
Date	Supplier invoice or transaction date	24 Aug 2026
Category	Nature of cost	Maintenance
Vendor	Select an existing vendor	ABC Technical Services
Supplier Text	Use only if vendor is not listed	One-time locksmith
Unit	Unit plus building; use General Company Expense only for office/company costs	101 - Marina Tower
Booking	Link only when cost belongs to a specific booking	BK-202608-014
Paid / Charged To	Company, Owner, or Tenant / Guest	Owner
Paid From	Actual bank, cash, card, or wallet	Operating Bank
Status	Normally Pending Approval	Pending
Amount and VAT	Enter gross or net consistently with VAT included switch	AED 525 incl. VAT
Reference	Bank or supplier reference	TRX-88421
Files	Attach receipt and supplier invoice	invoice.pdf

Owner expense example

A plumbing repair of AED 525 including AED 25 VAT belongs to Unit 101 in Marina Tower and is chargeable to the owner. Select the unit, choose **Owner**, attach the invoice, and submit as Pending. After approval, HHMS posts AED 525 as an expense and adds AED 525 as a debit on that owner's statement.

Important: selecting Owner automatically marks the expense as owner-billable. Confirm the selected unit belongs to the correct owner before approval.

3. Approval, correction, and deletion

An approver checks the source document, supplier, unit, responsibility, VAT, amount, payment account, and duplicate risk. Only then should the expense move to Approved or Paid.

Action	When to use	Result
Approve	All information and documents are correct	Creates/updates ledger posting; owner debit is created when approved
Edit	Correct category, amount, VAT, unit, vendor, or reference	Expense, ledger, and owner statement synchronize
Reject	Invalid, duplicate, or unauthorized cost	No accounting posting
Delete	Entry must be removed and user has authority	Linked ledger and owner debit are removed; use with care

Approval checklist

Check	Pass condition
Document	Readable supplier invoice/receipt is attached
Supplier	Vendor and TRN match the document
Unit	Correct unit and building
Responsibility	Company/Owner/Guest is contractually correct
VAT	Rate and included/excluded setting match invoice
Payment	Bank/cash and reference match proof
Duplicate	No existing entry with same date, amount, supplier, and reference

4. Utility bills and payments

Open **Accounting > Utilities**. First create the utility account for each unit and utility type. Then record monthly bills and settle them when paid.

Step	Entry
1. Utility account	Select unit, utility type, responsibility, supplier, account number, billing day, and contract dates.
2. Monthly bill	Choose utility account, bill month/date, due date, amount, VAT, responsibility, and notes.
3. Payment	Select bank/cash, payment method, reference, receipt, and whether owner paid directly.
4. Verification	Paid bill links to an expense and ledger entry. Owner-responsible bills also appear on the owner statement.

Example

DEWA bill: AED 420 net + AED 21 VAT = AED 441 total. Unit 1204 - Downtown Residence. If the company pays on behalf of the owner, responsibility is Owner, payment account is Operating Bank, and the owner statement receives a AED 441 debit after payment.

5. Booking invoices and income

Booking invoices are generated from the booking, renewal, or extension workflow. The accounting invoice list shows original, renewal, and extension invoices.

Event	System result
Booking created	Original invoice generated as Unpaid
Stay extended or renewed	Separate extension/renewal invoice generated
Payment proof attached	Booking and related unpaid invoices become Paid; rental income is posted
Invoice PDF	Download from Accounting > Booking Invoices
Reports	Paid/posting records feed income, receivables, VAT output, and P&L

Do not mark a booking paid unless the payment proof is verified. When several invoices exist, confirm the amount covers the intended original, renewal, or extension invoice.

6. Manual ledger entries

Use **Accounting > Ledger > Add Entry** only for authorized adjustments or transactions not created by another HHMS workflow. Avoid manually duplicating expenses, utility payments, or booking income.

Situation	Debit	Credit	Reference
Bank charge	Bank Charges expense	Bank/Cash	Bank statement reference
Owner adjustment debit	Owner/expense account	Owner payable	Approval note
Income adjustment	Bank/receivable	Miscellaneous Income	Receipt reference
Opening correction	Authorized account	Balancing account	Migration/approval reference

Debit and credit reminder

Assets and expenses normally increase with debits. Liabilities, equity, and income normally increase with credits. Every manual accounting adjustment should have an equal total debit and credit supported by approval.

7. Owner statements

Open **Accounting > Owner Statements**, select the owner and date range, then review entries by unit. Download the full PDF when sharing with the owner.

Statement item	Direction	Effect on owner balance
Rental income	Credit	Increases amount due to owner
Owner-billable expense	Debit	Reduces amount due to owner
Management fee	Debit	Reduces amount due to owner
Owner payout transfer	Debit	Reduces outstanding payable
Credit adjustment	Credit	Increases owner balance
Debit adjustment	Debit	Decreases owner balance

Before sending a statement

Confirm opening balance, date range, unit allocation, rental credits, expense documents, management fees, payouts, and closing balance. A negative balance means owner debits exceed credits for the selected history.

8. Reading accounting reports

Report	Purpose	Review
Profit & Loss	Income minus expenses for a period	Account classifications, unusual changes, net profit/loss
Balance Sheet	Assets, liabilities, and equity at a date	Bank balances, receivables, payables, equity
Cash Flow	Opening cash + inflows - outflows	Actual movement and closing bank/cash
AR Ageing	Unpaid booking invoices by age	0-30, 31-60, 61-90, over 90 days
AP Ageing	Pending/approved expenses by age	Upcoming and overdue supplier obligations
VAT	Output VAT less input VAT	Period, taxable entries, supporting invoices
Expense Analysis	Costs by date, unit, and category	Duplicates, spikes, wrong unit/category
Owner Statements	Owner credits, debits, and closing balance	Unit-level accuracy and attachments

Month-end routine

1	Complete and approve valid expenses
2	Record all utility bills and payments
3	Verify paid booking invoices and income
4	Reconcile bank/cash balances to statements
5	Review AR/AP ageing and owner balances
6	Review VAT input/output and missing documents
7	Review P&L and balance sheet for unusual balances
8	Export/archive reports and obtain approval

9. Quick troubleshooting

Problem	Check
Expense missing from owner statement	Unit selected, responsibility Owner or owner-billable enabled, status Approved/Paid, correct owner
Expense missing from P&L	Status is posted/approved/paid and category maps to an expense chart account
Bank balance looks wrong	Paid From account selected, entry not duplicated, opening balance correct
Invoice still unpaid	Payment proof successfully attached to the correct booking
VAT incorrect	VAT included switch, rate, net/gross amount, and supplier tax invoice
Duplicate amount	Search reference, date, supplier, unit, and imported transaction ID
Wrong owner charged	Correct the expense unit/owner before issuing statement; recheck synced statement entry

Escalate immediately

Do not force or invent entries when totals cannot be reconciled, documents are missing, a closed period needs changing, the wrong owner was charged, VAT treatment is uncertain, or a bank balance differs from the statement. Escalate to the authorized accountant or super administrator.
